PROFILE

Software Engineering graduate from Telkom University, with a vocational software engineering background behind it: seven years of formal training in building software. I have built three projects from requirement to working product, including my final-year project: a Scrum-style project management tool with story points and a kanban board. Comfortable across the stack, and already working the way teams do: Git branching, automation testing with Katalon, and static analysis with SonarCloud inside CI/CD.

EDUCATION

Bachelor of Software Engineering (S1 Rekayasa Perangkat Lunak) 2022 – 2026

Telkom University

Coursework in software design, database systems, software testing, and system analysis.

Vocational High School — Software Engineering (RPL) 2019 – 2022

SMK Informatika Pesat, Bogor

PROJECTS

Project Management Tool — Final Project 2025 – 2026

Scrum-style project management application: story points, task management, and a kanban board where work moves through To Do, In Progress, Review, and Done. Built end to end as my final-year project.

React.js · PHP · Supabase (PostgreSQL) · Vercel

Live demo: fe-project-management.vercel.app · demo login: pm@test.com / pm123456

Internet Cafe Reservation System Jul 2024 – Jan 2025

Mobile and web app for internet cafe reservations: booking, payment, and user management. Built the clients, the backend, and the data model.

Flutter · React.js · Express.js · MySQL

E-commerce Platform Mar 2023 – May 2023

E-commerce application with an integrated CMS, so catalogue and content could be managed without touching code.

PHP · JavaScript · MySQL

EXPERIENCE

Web Design Intern Jun 2020 – Aug 2020

Tunas Solution

- Designed and built web page layouts with **HTML, CSS, and Figma**, working to the layouts and revisions the team asked for.

TECHNICAL SKILLS
